

PERSONAL SECURITY AUDIT REPORT

Auditor: K M Sanavi Gowramma

Audit Date: 14 July 2026

Engagement: Personal Digital Security Assessment

Methodology: Scope > Intelligence > Exposure > Severity > Remediation

1. SCOPE

Systems and accounts assessed:

Item	Details
Primary Email	<REDACTED>
Key Accounts	Google, Apple ID, GitHub, LinkedIn, Instagram
Primary Device	iPhone
Network	Home Wi-Fi

2. EXECUTIVE SUMMARY

A personal digital security assessment was conducted to evaluate the security posture of key online accounts, devices, and public OSINT exposure. The audit identified several moderate-risk findings related to authentication and account configuration. Multiple security improvements, including enabling multi-factor authentication and revoking unused third-party applications, were completed during the assessment.

3. FINDINGS

CRITICAL

- No critical findings identified.

HIGH

- Multi-factor authentication (MFA) was not enabled on Google, GitHub, and Apple ID before the audit.

MEDIUM

- 29 third-party applications had access to the Google account. Seven unused applications were identified.

- Primary email was publicly associated with a Google profile through OSINT enumeration (EPIEOS).
- Router is still using the default administrator password.

LOW

- LinkedIn profile visibility allows email visibility to first-degree connections.

4. ACTIONS TAKEN DURING AUDIT

- Enabled multi-factor authentication where applicable.
- Reviewed all active login sessions and confirmed they belonged to authorized devices.
- Revoked access for seven unused third-party applications.
- Reviewed password hygiene and confirmed all important accounts use unique, strong passwords.
- Updated account privacy settings.

5. REMEDIATION PLAN

This week:

- Change the default administrator password on the home Wi-Fi router.
- Enable Find My iPhone on the Apple device.

This month:

- Perform a quarterly reviews of third-party application permissions.
- Conduct a periodic OSINT reviews to monitor publicly available personal information.

NOTE: Personal identifiers have been redacted to protect privacy

Skills Demonstrated

- OSINT Investigation
- Security Configuration Review
- Identity and Access Management (IAM)
- Multi-Factor Authentication Assessment
- Password Hygiene Assessment
- Risk Assessment
- Security Documentation
